Project Description

Lecturer: Michal Menšík

University/Company: Moravian University College Olomouc

Country: Tschechien

Information for decision making

Content:
Developing knowledge for decision making and also soft skills such as teamwork, communication, presentation.
• Experience and intuitive decision making
• Technical and formal decision making
• Emotional decision making
• Responsibility and decision making
• Feedback
Also the “invisible part” is focused on soft skills. After each part students present their decisions and defend them in the classroom. Also students learn to evaluate themselves and communicate positive/negative feedback, as after each class there will be a four step evaluation.
The project is therefore focused on the decision making and decision making support information as well as on developing soft skills and handling the responsibility for themselves as well as for the team mates.

Methods:
The whole project is designed as one case study, which will guide students step by step through different decision making situations. Methods are frontal learning, flipped learning and partly game based and experiential learning.

Competences and skills to be acquired:
Students will be able to handle the knowledge from the area of information for decision making, performance measurement and performance management. Based upon this, students will be able to define problems, set criteria for evaluating alternatives, choose the best alternative and evaluate the results. Students will be also able to think in broader perspective (such as strategy, vision, CSR …) and connect different areas of business. As a bonus, student will be able to handle the responsibility for the team and for themselves. They will also learn how to criticise or support.
**Prerequisite:** Basic knowledge of economic terminology (Revenues, Costs, Expenses, Cash Flow),
Basic knowledge of MS Office (using MS Excel, Powerpoint, Word)

**Language of instruction:** English

**Suitable studies:** PUMA, PMG, GT, EÖS, TSA, SoMa, BW/IBW
